**SAS 9.4 Installation for Windows**

SAS is a statistical package with analytical solutions ranging from simple statistics to advanced data mining solutions. The university has a site license for SAS that allows it to be installed on any university-owned computers when used for teaching or non-commercial purposes. In addition, student, faculty and staff home use on personal equipment is included at no additional cost. SAS installations on university-owned computers for any other purpose, including administrative use require separate licenses to be purchased.

1. To install **SAS 9.4**, insert the flash drive and double click **Setup.exe**. In the **Choose Language window**, choose the language you wish to use for the setup of **SAS** and click **OK**.
2. In the **Select Deployment Task** window, choose **Install SAS software** and click **Next**.

3. Select Deployment Type: **Install SAS Foundation and Related Software**. After your selection of Install SAS Foundation and Related Software, click on **Next**.
4. **Select Products to Install:** Under the *Products to Install*, select **SAS Foundation and related software**. The products will be automatically selected for you.
